

Chaewoon Ki

✉ kichaewoon@gmail.com | 🌐 kichaewoon | 📄 chaewoonki | 📍 Seoul, South Korea

RESEARCH INTERESTS

Reasoning & Reliability, Agentic AI, Self-Evolving Memory, LLM Applications

EDUCATION

KAIST (Korea Advanced Institute of Science and Technology)
B.S. in Computer Science, Specialized Track in Artificial Intelligence

- GPA: 3.74 / 4.3
- Dean's List, top 3% in College of Engineering (Fall 2024)

Mar 2022 – Aug 2026
Daejeon, South Korea

New York University
Minor in Biomolecular Science (Exchange Program)

- GPA: 4.0 / 4.0

Jan 2025 – May 2025
New York, NY, USA

PUBLICATIONS

[C1] PersonaTrail: Benchmarking Personalized Web Agents through Browsing Trails
Seungbin Yang*, **Chaewoon Ki***, Dohyun Lee, Jaegul Choo, ChaeHun Park.
In submission, ARR August. [\[paper\]](#) (equal contribution)*

HONORS & AWARDS

KAIST Academic Scholarship, full tuition (2022–2026)
College of Engineering Dean's List, top 3% (Fall 2024)
KIAT Korea–U.S. Advanced Industry Exchange Scholarship (Spring 2025)
Lim Mi-Sook Scholarship, awarded for leadership (Fall 2024)

RESEARCH EXPERIENCE

MLAI Lab, KAIST (PI: Prof. Sung Ju Hwang)
Research Intern

- Developing a world model for autonomous **Research Agents** to predict experimental outcomes, computational costs, and prediction confidence before execution, using proposed code changes and past execution history
- Applying **LoRA-based supervised fine-tuning and reinforcement learning** to predict improvement, degradation, or failure and estimate score changes on OpenEvolve-based mathematical and algorithmic tasks
- Designing an **uncertainty-aware execution policy** that prioritizes promising or uncertain proposals while deferring confidently unpromising ones, aiming to reduce execution costs while preserving exploration

Jun 2026 – Present
Daejeon, South Korea

DAVIAN Lab, KAIST (PI: Prof. Jaegul Choo)
Undergraduate Research Intern

- Co-first author on **PersonaTrail**, a benchmark evaluating an agent's ability to infer users' implicit preferences from raw browsing histories under under-specified queries
- Built a two-level memory framework (**PACMEM**) separating factual memory (task-level navigation logs) and preference memory (long-term behavioral patterns), with embedding-based retrieval and LLM reranking to fit context constraints
- Designed the benchmark pipeline (website curation, query templates, trajectory rollout) and personalization metrics; served open-source LLMs (Llama 4 Scout, Qwen) via vLLM on H200 GPUs

Nov 2025 – Present
Daejeon, South Korea

SynBi Lab, KAIST (PI: Prof. Gwansu Yi)
Individual Study

Jul 2024 – Jan 2025
Daejeon, South Korea

- Contributed to AI-driven drug-target binding research; implemented a GNN-based protein pre-training module for a fragment-based drug generation model
- Applied a Graph Autoencoder to compress high-dimensional protein graph data into structure-preserving representations for downstream learning

WORK EXPERIENCE

Pebblous

Dec 2023 – Jul 2024

Research Intern, Data Science Team

South Korea

- Collected and preprocessed 8 public battery datasets (NASA PCoE, CALCE CS2, etc.) into a unified pipeline across heterogeneous data environments
- Ran comparative ML/DL experiments (LSTM, GRU, LightGBM, XGBoost) via PyCaret AutoML; identified LightGBM as the top performer and uncovered a DL shifting artifact, and authored a research paper on SOH prediction methods

PROJECTS

Fitfor – Exercise Recommendation Platform for Wheelchair Users

Fall 2024

- Redefined the problem scope through direct interviews with wheelchair users, pivoting to an adaptive exercise recommendation system based on individual physical capability
- Built an LLM-based adaptive recommendation pipeline (FastAPI, Next.js, OpenAI API); **won the People's Choice Award** at Kakao Impact's "Tech for Impact" program

FOSSLight Dataset Scanner – Industry Collaboration with LG Electronics

Fall 2025

- Built a CLI tool that recursively traverses Hugging Face/GitHub dependencies to automatically analyze open-source model and dataset licenses, with an LLM-based README analysis module replacing brittle regex rules
- Constructed an 80-case evaluation set; achieved **F1 97.56%** (Accuracy 95.24%, Precision 100%, Recall 95.24%)

Detecting and Separating AI-Generated Voices

Summer–Fall 2024

- Built a Res2Net-based detector for genuine vs. AI-generated voices, reaching **Top 20%** at the Dacon SW-Centered University AI Competition
- Extended the work to speech separation (Asymmetric Encoder-Decoder) to handle the separation bottleneck, covering human-animal mixed audio; improved **SI-SNRi by +2.3 dB** and SDRi by +1.96 dB over baseline, winning 2nd place in the Introduction to AI course competition

SKILLS

AI / ML: LLM Web Agents, RAG, Agent Memory Systems, Context Engineering, Embedding-based Retrieval

Frameworks & Tools: PyTorch, FastAPI, Playwright, Next.js, vLLM, Vector DB

Programming: Python, C/C++, Java, SQL

Languages: Korean (Native), English (TOEIC 960, OPIc AL)
